

Smart Habit Tracker — User Journey

1. User opens the application

The user sees a simple landing/authentication screen:

SMART HABIT TRACKER

Build habits. Stay consistent.

[Login] [Register]

A new user registers with:

Name

Email

Password

An existing user logs in.

After successful authentication → **Dashboard**.

2. First-time Dashboard

A brand-new user doesn't have habits yet.

Dashboard My Habits Progress Profile

Good Morning 🙌

Saturday, July 25

TODAY'S PROGRESS

0 / 0

You don't have any habits scheduled for today.

[+ Create Habit]

The obvious first action is to create a habit.

3. Creating a Habit

User clicks **Create Habit**.

For example:

CREATE HABIT

Habit Name

[Study]

Description / Target

[Study for 2 hours]

Repeat On

☒ Monday

☒ Tuesday

☒ Wednesday

☒ Thursday

☒ Friday

☒ Saturday

☒ Sunday

[Create Habit]

So every habit has three important pieces of information:

WHAT? → Study

TARGET? → Study for 2 hours

WHEN? → Every day

Another example:

Habit:

Workout

Target:

45 minute gym session

Schedule:

Mon Tue Wed Thu Fri

And:

Habit:

Bike Ride

Target:

Ride for at least 1 hour

Schedule:

Sunday

The user can create **multiple habits**, each with its own schedule.

4. Today's Dashboard

This is the main screen the user will interact with every day.

Suppose it's Monday.

Dashboard My Habits Progress Profile

Good Morning 🙌

Monday, July 27

TODAY'S PROGRESS

3 / 5 Completed

TODAY'S HABITS

Complete	Habit	Description / Target	
☒	Workout	45 minute gym session	
☐	Study	Study for 2 hours	
☒	Drink Water	Drink 3 litres	
☐	Read	Read 20 pages	
☒	DSA Practice	Solve at least 3 problems	

This **3-column layout** is intentional:

Checkbox | Habit | Description/Target

The target stays visible so the user knows what "completed" actually means.

5. Completing a Habit

Suppose the user has:

☐ | Study | Study for 2 hours

They study for two hours and click the checkbox:

☒ | Study | Study for 2 hours

Immediately:

3 / 5 Completed

4 / 5 Completed

The Tracking Service records today's completion.

6. User can undo completion

If they accidentally mark:

☒ Study

they simply click it again:

☒ → ☐

The user isn't permanently locked into their first click.

7. Dashboard automatically changes by weekday

This is an important feature.

Suppose the user has:

Workout

Mon Tue Wed Thu Fri

Study

Mon Tue Wed Thu Fri Sat

Drink Water

Every Day

Bike Ride

Sunday

On **Friday**, Dashboard shows:

☐ | Workout | 45 minute gym session

☐ | Study | Study for 2 hours

☐ | Drink Water | Drink 3 litres

On **Sunday**:

☐ | Drink Water | Drink 3 litres

☐ | Bike Ride | Ride for at least 1 hour

The user doesn't create separate Monday/Sunday tables.

The application automatically determines today's day and displays the appropriate habits.

8. My Habits

This page answers:

"What habits have I created?"

MY HABITS

+ Create Habit

Study

Study for 2 hours

Every Day

[Edit] [Delete]

Workout

45 minute gym session

Mon Tue Wed Thu Fri

[Edit] [Delete]

DSA Practice

Solve at least 3 problems

Mon Tue Wed Thu Fri Sat

[Edit] [Delete]

Bike Ride

Ride for at least 1 hour

Sunday

[Edit] [Delete]

From here the user can:

Create, view, edit and delete habits.

9. Editing a Habit

Maybe the user's Workout schedule was:

Mon Tue Wed Thu Fri

but now they want Saturday too.

They open Edit:

EDIT HABIT

Habit

[Workout]

Target

[45 minute gym session]

Repeat

☒ Mon

☒ Tue

☒ Wed

☒ Thu

☒ Fri

☒ Sat

☐ Sun

[Save Changes]

From then onward, Workout appears on Saturday too.

10. Progress & History

This will be the more visually interesting part of SHT.

At the top:

PROGRESS & HISTORY

THIS WEEK

Completed Habits 24

Scheduled Habits 30

Completion Rate 80%

Then **graphs**.

For example, weekly completion:

COMPLETION BY DAY

Mon  80%

Tue  60%

Wed  80%

Thu  40%

Fri  80%

Sat  75%

Sun  100%

We can also have a progress trend graph showing whether consistency is improving over time.

We'll decide the exact graph types later rather than overdesigning them now.

11. Streaks 🔥

The Progress page can also show:

CURRENT STREAKS

🔥 Drink Water 14 days

🔥 Study 8 days

🔥 Workout 5 days

DSA

4 days

So users have another reason to remain consistent.

12. Individual Habit History

A user can inspect something like **Study**:

STUDY

Target: Study for 2 hours

THIS WEEK

Monday ✓

Tuesday ✓

Wednesday X

Thursday ✓

Friday ✓

Saturday ✓

Sunday ✓

The meanings are:

✓ Completed

X Scheduled but not completed

- Not scheduled

That last distinction matters.

For example, Workout is only Monday-Friday:

Workout

Mon ✓

Tue ✓

Wed ✗

Thu ✓

Fri ✓

Sat -

Sun -

Saturday and Sunday **do not hurt the user's completion rate**, because Workout wasn't scheduled on those days.

13. Profile

Finally:

PROFILE

We keep account management simple.

The entire user flow

Progress / History

Graphs

Streaks

History

The core idea in one sentence

If your teacher asks what the user actually gets from SHT:

A user creates habits with specific targets and weekly schedules; the application automatically shows the relevant habits each day, lets the user track completion, and provides history, streaks, completion statistics, and visual graphs to measure consistency over time.
